

PRATHEEN REDDY PININITI

AI Application Development Engineer | GenAI • Intelligent Agents • RAG • Business Automation

Boca Raton, FL | ppatheen@gmail.com | 561-323-3086 | pratheenportfolio.netlify.app | linkedin.com/in/pratheen | github.com/pratheen13

PROFESSIONAL SUMMARY

M.S. Artificial Intelligence candidate (GPA 3.9, Florida Atlantic University, May 2026) who designs and ships AI-powered business applications, intelligent agents, and automation solutions. Hands-on experience building conversational and workflow agents with prompt engineering, Retrieval-Augmented Generation (RAG), and LLMs, and integrating them with backends and APIs. Strong ownership from concept through deployment, with a track record of translating business requirements into practical, production-facing AI solutions in Python, JavaScript/TypeScript, and cloud environments.

EDUCATION

M.S. Artificial Intelligence | GPA: 3.9 | Florida Atlantic University — Boca Raton, FL Aug 2024 – May 2026

- Thesis: SPAD Camera Image Analysis — DN-Domain Noise Characterization of the Canon MS-500

B.Tech Computer Science (AI & ML) | GPA: 3.7 | Lovely Professional University — India May 2024

EXPERIENCE

Graduate Research Assistant — AI & Imaging Systems | Florida Atlantic University × Canon Inc. (Collaboration) — Boca Raton, FL Jan 2025 – May 2026

- Built a proof-of-concept agentic automation tool (LangChain + ReAct) that drove iterative diagnostics end to end with minimal supervision, demonstrating AI-enabled business-process automation.
- Developed a 5-tier Python analysis pipeline for the Canon MS-500 sensor, cutting characterization time by roughly 60% versus manual methods.
- Designed reusable analysis components and solution patterns adopted by the research team; findings published in a formal thesis for Canon stakeholder review.
- Collaborated cross-functionally with Canon engineers and the faculty committee to translate business requirements into AI deliverables aligned with Responsible AI principles.

Teaching Assistant — Machine Learning & Communication Networks | Florida Atlantic University — Boca Raton, FL Jan 2025 – May 2026

- Facilitated ML labs (regression, classification, deep learning) for 60+ students; created enablement assets and reusable curriculum materials.
- Graded and provided feedback on advanced ML coursework, reinforcing best practices in model evaluation and responsible deployment.

Founder & AI Engineer — Auraltr (Fashion Tech Startup) | Self-Directed / Startup — Boca Raton, FL May 2026 – Present

- Designed and shipped a GenAI application MVP (React Native, LLM-based recommendations, CLIP semantic search, Supabase) from concept to production in 8 weeks, owning the full lifecycle solo.
- Built an end-to-end automated workflow — onboarding → semantic search → GenAI generation → affiliate monetization — integrating third-party APIs and connectors.
- Implemented a backend with role-based data governance and secure API key management.

TECHNICAL SKILLS

GenAI & Agents: LLMs (LLaMA, Mistral, Azure OpenAI-compatible), prompt engineering, RAG, AI agents & orchestration (LangChain, LangGraph, ReAct), conversational & workflow automation

Languages: Python, JavaScript, TypeScript, C# (familiar), SQL

Cloud & Platforms: Azure, AWS (Bedrock, SageMaker), REST APIs & connectors, Git, CI/CD, Supabase, Firebase, pgvector, Power BI

Frameworks & Tools: FastAPI, React, React Native, PyTorch, TensorFlow, Agile development

Familiar with (Microsoft agent stack): Copilot Studio (conversational UI/intent classification), Power Apps (structured UI), Power Automate (workflow orchestration), Azure AI Foundry (reasoning/unstructured data), Dataverse/Dynamics 365 (system of record)

KEY PROJECTS

Warroom — Conversational Multi-Agent Platform (ReAct + RAG + LangGraph) | 2025

- Designed and built a multi-agent system combining conversational reasoning (ReAct), knowledge-based retrieval (RAG), and stateful orchestration (LangGraph) — the same core pattern behind Copilot Studio agents and workflow-automation bots.
- Created reusable agent components and solution patterns intended for reuse across business-automation use cases.

FocusFeed — Workflow Automation Agent (Android) | 2025

- Built and shipped an end-to-end automation agent that monitors app state and triggers actions in real time, using remote configuration to adjust behavior in production without redeploying the app.
- Owned the solution from concept through deployment and post-launch support, troubleshooting production behavior via remote config.

NeuroPulse — Knowledge-Based Risk Assessment App | 2025

- Built a knowledge-based AI solution that pairs a trained risk model with an explainability layer and an interactive visualization, translating model output into something non-technical stakeholders can trust and act on.

PUBLICATIONS & CERTIFICATIONS

- Thesis Published: SPAD Camera Image Analysis — Canon MS-500 (2026)
- Google Advanced Data Analytics Professional Certificate (2025)
- Google UX Design Professional Certificate (2025)
